Chip manual (Linux)

Keep this. When Chip isn't running, copy a command below and paste it.

1. Open a terminal in the Chip folder

Open the folder in Files, right-click an empty spot, choose **Open in Terminal**.

2. Paste the command

Ctrl + Shift + V, then press Enter.

Start Chip

```
python3 laptop/chip.py start
```

Start Chip by itself when the laptop starts

```
python3 laptop/chip.py autostart on
```

Is Chip running?

```
python3 laptop/chip.py status
```

Stop Chip

```
python3 laptop/chip.py stop
```

Set Chip up again (if the commands above fail)

```
laptop/install.sh
```

Start Chip on the phone (type in Termux on the phone)

```
chip-start
```

The Chip folder is the one you downloaded (`deskbuddy` or `deskbuddy-main`); it has a `laptop` folder inside. Then open `http://127.0.0.1:8765` for the dashboard.
